ARIEL MOTORCYCLES

The smart way to

The 50 c.c. Ariel Pixie is low in first

The 50 c.c. Ariel "Pixie" is something entirely new in ultralightweight motor cycles. Like the famous Ariel leader and Arrow motor cycles it is of very advanced design. The engine is an overhead valve four stroke offering complete reliability and great economy. This is combined with a four speed gearbox and mounted in a unique and most attractive ground seat "chassis". Revolutionary rubber suspension front and rear provides freedom under all conditions. The "Pixie" is low in first cost, light and easy to handle and is ideal for personal everyday transport.

STEEL BEAM SUSPENSION

The unique rubber suspension system provides a smooth and comfortable ride and offers the maintenance free safety steel beam.

FUEL ECONOMY

Thanks to the overhead valve four stroke engine for extra economy. It's the smart way to go.

HEAVY SUSPENSION

There are many more shocks than any other motor cycle. These suspension units are rubber and mounted in revolutionary aluminium.

LIGHT WEIGHT

The light weight steel chassis, the overhead valve four stroke engine, the gearbox and the seat are completely new. The Ariel Pixie is the lightest of her class.
